

Custom Magnet Setup Guide

IMPORTANT INFORMATION

Bleed: All design files should have a 1/8" bleed added to the final trim size, if edge-to-edge printing is desired.

Safe Zone: Important details in your photo or artwork, along with all text should be placed 1/8" inside the trim line. This area is called the safe zone. Anything placed outside the safe zone line could be cut off.

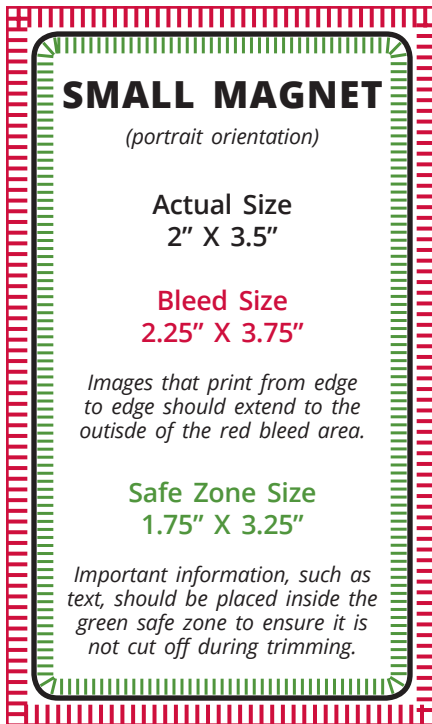

Print Your Design: There are no refunds or reprints on customized products. Monitors, screens, and phones may distort color and make errors difficult to see. Therefore, it is important to print your design before submitting it to print.

Accuracy: Carefully check spelling, wording, date, and size. Do not submit your artwork if there are mistakes.

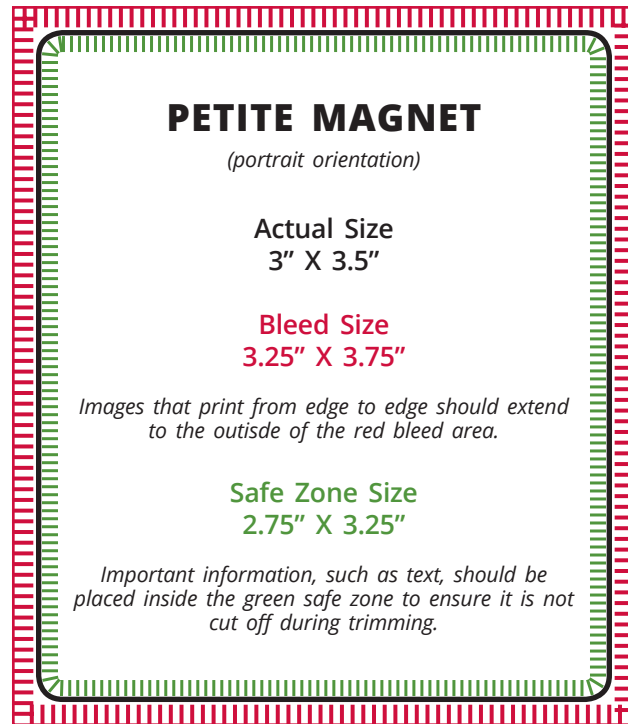

Photo Quality: We recommend submitting photos that are 300 dpi. Photos taken with cell phones have lower resolution and may result in pixilated prints. We recommend enlarging your photo to 300% on your monitor to see if it looks blurry or pixilated.

Colors: Monitors, screens, and phones render color differently than printing presses and should never be used for proofing purposes. A printed proof will provide the most accurate color display but differences between personal printers and our professional press are likely to occur. If you are concerned about color or print quality we encourage you to order a "Printed Press Proof" before ordering a larger quantity.

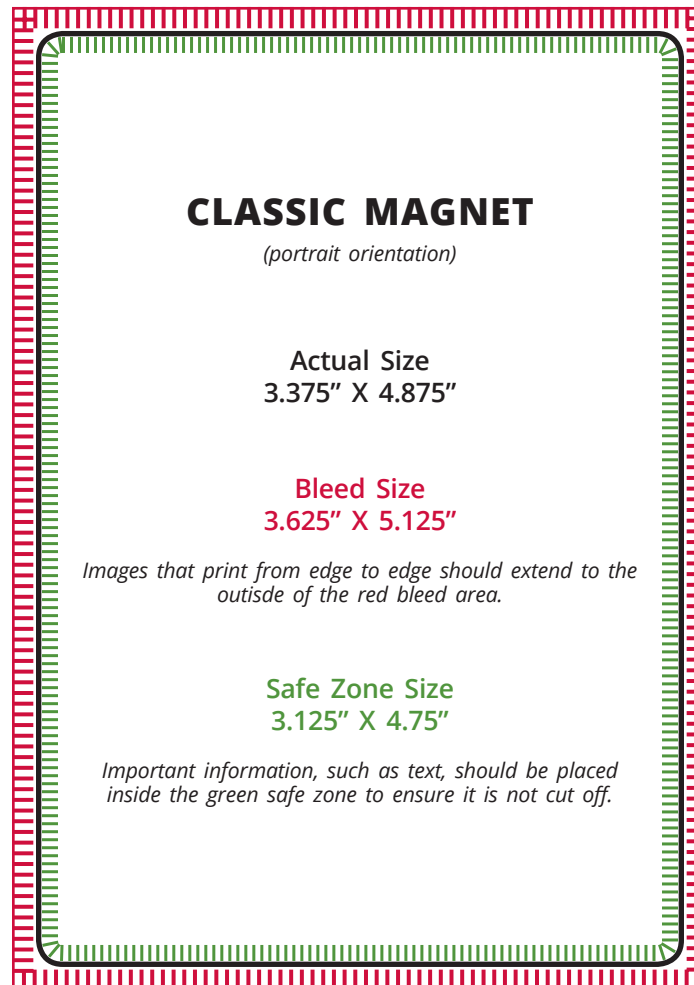

Printed Press Proof: You may order a "Printed Press Proof" (quantity 1) for a small fee. Your design file will be saved so you can order more items in the future. There are no refunds or reprints on printed products so we suggest purchasing a printed press proof first. To order, simply purchase a quantity of 1 from the custom magnet order form.
